

**Domestic Fundamentals:****Market Outlook:**

**According AP Agricultural Department, Cotton output in the state, in the 2018-19 season is seen declining 6% on year to 1.91 mln bales.** Yield is seen at 525 kg per ha compared with 580 kg per ha in 2017-18. Agriwatch is expecting cotton output for the season for the state it will be around 1.65 mln bales.

**As per the latest estimates by Agriwatch, cotton output in country during the season 2018-19 would be around 338.22 lakh bales (of 170 kg each) which is lower compared to 365 lakh bales of last season.** AW has reduced the crop estimate for Gujarat to around 92.82 lakh bales (from 108 lakh bales last year), Maharashtra to around 72 lakh bales (83 lakh last year), Telangana and AP by 52.00 lakh and 16.50 lakh bales respectively. The main reason for reduction in cotton crop is that farmers have uprooted more than 50% of their cotton crop after second picking and foregone the third and fourth pickings due to moisture deficiency and pest attacks. Dry spells in the initial stages of the crop, too, led to stunted growth of bolls, were the major reasons to decline in cotton yield in India.

**Agriwatch expects imports of cotton during current year may reach 27 lakh bales as against last year's of 15 lakh bales.** This is supported by weak global prices, which have touched their lowest levels in more than a year at 72.1 cents per pound for ICE futures by December. The volatility in exchange rate, and expectation of lower output this year leads to higher imports of cotton. Although imports are higher than last year, importers are finding it difficult to locate quality material as good quality cotton of the US, Australia and Brazil has already been sold. Also, exports have declined to 53 lakh bales compared to 70 lakh bales during corresponding period of last year. The reduction in exports is mainly due to stronger Indian Rupee, lower production and weak international prices.

**The CAI has estimated cotton crop for 2018-19 season at 335 lakh bales of 170 kgs each which is lower by 5.25 lakh bales than its previous estimate of 340.25 lakh bales made during last month.** Statements containing the State-wise estimate of the cotton crop and the Balance Sheet for the crop year 2018-19 with the corresponding data for the previous year are enclosed. The CAI has reduced the crop estimate for Gujarat, Maharashtra and Telangana by 1.50 lakh bales, 2 lakh bales and 2 lakh bales respectively. The main reason for reduction in cotton crop is that farmers have uprooted their cotton plants in about 70-80% cotton area due to moisture deficiency due to less rains and as a result of which there is no scope for 3rd and 4th pickings.

**MCX cotton slipped to 8-month low in Dec mainly due to lower demand from mills and pick up in arrivals.** So far India has shipped around 14 lakh bales of cotton. The cotton exports is expected to decline by 20-22% to around 51-53 lakh bales during 2018-19 season due to lower production and coupled with currency fluctuations.

**Weather Forecast for tomorrow:**

During the next 24 hours, light to moderate rain and snow is expected over many places of Jammu and Kashmir, Himachal Pradesh and isolated pockets of Uttarakhand and Arunachal Pradesh. Isolated rains may also occur over North Punjab. Minimums are expected to rise over the northwestern plains and maximums may drop over Jammu and Kashmir, Himachal Pradesh, Uttarakhand and parts of Punjab. Pollution levels over Delhi-NCR will remain unchanged.

**International Fundamentals:**

**ICE March cotton settled at 73.13 cents, up 1.46 cents, July was at 75.66 cents, up 1.26 cents and December was at 74.19 cents, up 0.96 cent.** Wednesday's estimated volume was 35,900 contracts traded. Sharply higher crude oil prices and a weaker dollar were supportive. Some of the focus in the recent US/China trade talks was over China's pledge to buy

a substantial amount of US goods. At the moment, we have little way of gauging current export demand with the government shutdown keeping the Export Sales reports from being released.

**U.S. cotton production is estimated at nearly 18.6 million bales- around 2.3 million bales (11 percent) below the 2017 crop.** Planted and harvested area this season are estimated at 14.0 million and 10.4 million acres, respectively; detrimental weather conditions in the Southwest and Southeast this season pushed the national abandonment rate to 26 percent, the highest in 5 years. The 2018 national yield is forecast at 860 pounds per harvested acre, below last season's record of 905 pounds but above the 3-year average of 846 pounds. Upland cotton production is estimated at 17.8 million bales, the second largest in a decade. The extra-long staple (ELS) crop is forecast at 771,000 bales, the largest since 2012's 780,000 bales.

**For China, 2018/19 cotton production is projected at 27.0 million bales, 500,000 bales (2 percent) below a year earlier, with both harvested area and yield forecast lower.** Most of China's cotton is produced in the western region of Xinjiang, where yields are significantly higher and have resulted in record yields for China in recent years as Xinjiang's share of the crop has risen. However, the national yield in 2018/19 is expected to dip below the 2017/18 record of 1,761 kg per hectare to 1,755 kg per hectare.

**Pakistan's production in 2018/19 is forecast at 7.4 million bales, 800,000 bales (10 percent) below 2017/18 and the smallest crop there in 3 years.** An 11-percent reduction in area is largely responsible for this season's decline, as yield is projected to rise slightly to the 5-year average of 671 kg per hectare. For Australia, lower area and yield are reducing the crop by nearly 50 percent to 2.5 million bales, the lowest in 4 years.

**Cotton production in Brazil is forecast to reach 11.0 million bales in 2018/19, 1.8 million bales (19 percent) above last season.** Excellent growing conditions, in addition to favourable prices, are expected to push plantings—which largely occur in December and January—to 1.4 million hectares, the highest since a similar amount was harvested in 2011/12. Brazil's yield is also forecast higher in 2018/19, reaching a record of 1,711 kg per hectare and eclipsing 2017/18's high of 1,708 kg per hectare.
